Nine steps to critical event management

An Everbridge white paper on this topic can be found [here](#). The report explains why the traditional approach to managing emergencies and business disruptions is outdated and shares a holistic approach to Critical Event Management (CEM) that enables a more unified, efficient, distributed, automated and collaborative process.

The nine steps listed are:

1. Devise a plan
2. Build partnerships with leadership
3. Assess your risks and sources of information
4. Identify critical assets and functions
5. Quantify and prioritise your risk
6. Identify and locate all stakeholders
7. Visualise with a common operating picture
8. Automate workflows
9. Analyse performance
